The screenshot shows a web browser window with the URL `spinba.se/search`. The page header includes the SPINVERSE logo, a search bar, a feedback link, and a user profile icon labeled 'TE' with a 'Log out' link. A white arrow points to the 'Log out' link. The main content area displays 'Your request is still pending.' with navigation tabs for 'FUNDING', 'PARTNERS', and 'PROJECTS'. A modal dialog is open in the center with the title 'Please verify your email address' and the message 'Your email address has not been verified. Please follow the link sent to your email.' A red arrow points to the 'Close' button in the dialog. The footer contains links for 'Terms of service' and 'Privacy policy', and a note that 'Spinbase service is partly based on information from European Union open data.'

05	Use case 3 - Project search	23
06	Other functionalities	26
07	Where to get more help?	29

Use case 1: Find the right funding calls quickly

- **Through organization strategies**

- Take a snippet from your organizational strategy. Copy-paste it on Spinbase to find calls relevant to your strategy.

→ Tips: Use “Export” functionality to build a strategic roadmap of calls, which can be your timeline and action plan to apply for funding.

- **Through project idea list (both future projects and past projects) – Flagship projects?**

- Do you have a luggage of project ideas you want to implement? Use Spinbase to check the right calls for your ideas. Example: “a teaching program on mental health, violence and sexual abuse for students in 2nd and 9th grade and school staff”

- **Through your ecosystem of stakeholders**

Searching tips

- **What query works best**

- Clear and focused query leads to a better result
- Project objectives – expected outcomes
- Keywords do work; however, our AI is designed so that longer query give more context and finds better matches. Try to clarify by adding some more information. E.g. “water” versus “using water as an energy carrier, comprising both heating and cooling”.

- **Use the filter!**

- you can order by deadline, budget, and Technology Readiness Level (TRL) *and* you can filter specific programmes and types of actions
- Call status: open, closed, **draft**, forthcoming

- **Check the filters as well..**

- Sometimes you might forget to clear the filter when doing a new search → weird results coming up.
- If this happens, check that you don't have some filter on that affect the result list

Digital Europe – Testing and Experimentation Facility for Manufacturing

Objective The world-class large-scale reference site for testing and experimentation of AI-powered solutions will enable integrating state-of-the-art AI and robotics technologies in the manufacturing domain, and will foster the deployment of trustworthy, transferable and scalable industrial AI in Europe. A transition towards a more AI-driven manufacturing industry will improve quality and sustainability of production. Scope The manufacturing TEF will provide physical and virtual access to real-life manufacturing resources that can be used for testing and experimenting with AI solutions. Examples of such manufacturing resources are model factories that combine different technologies...

Better Factory will provide methodology. Better Factory will provide technology capable of manufacturing new and personal system which can be deployed on a free robots considering the individuality and workplaces, resulting in 13% cost reduction.

Germany-Netherlands INTERREG open call for proposals

The main objectives of the cooperation program is to increase the innovative capacity of the border region and to reduce the barrier effect of the boundary. A natural person or a legal entity, organisation or a company can file a project application. Exclusively projects with Dutch and German cooperation, will be funded.

The first priority of the program is to strengthen the competitiveness of the region through smart growth. To have a good competitive position as region, in Europe, it is important to invest in research and development. **The strong representation of high-tech companies and research institutions in the region, offers the opportunity to – in constant cross border collaboration – improve market opportunities and sustainable support SMEs.**

To achieve the objectives in the field of innovation, especially for the program relevant sectors such as Agribusiness/food, Health & Life Science, High Tech Systems & Materials (HTSM), Logistics and Energy / reduction of carbon dioxide, it is necessary to create more and better cross border clusters and to conduct joint research. The program invests in the above mentioned sectors in the form of the so called strategic initiatives.

OBJECTIVE 1: INNOVATION IN SMEs
As a result of the support of projects in priority 1, product and process innovations in SMEs are pursued. The result of the contribution of the program will be positively assessed at the end of the program period if it shows that the percentage of SMEs, which introduces product and/or process innovations, has been increased.

OBJECTIVE 2: ENERGY AND LOW CARBON ECONOMY
The transition of the energy system and a more sustainable use of natural resources are both for Germany and for the Netherlands one of the key priorities and a big challenge for the border region in the coming years. To support the transition of the energy system, new technologies and innovations are required. These technologies and innovations lead to reinforcement of the competitiveness in the region, and are essential for the development of the border region for a low carbon economy. Especially in this area, both countries can learn a lot from one another.

INTERREG – Germany-Netherlands INTERREG open call for proposals

The main objectives of the cooperation program is to increase the innovative capacity of the border region and to reduce the barrier effect of the boundary. A natural person or a legal entity, organisation or a company can file a project application. Exclusively projects with Dutch and German cooperation, will be funded.

ICT Innovation for Manufacturing Sustainability in SMEs (I4MS2) (Made in Europe Partnership) (IA)

ExpectedOutcome:

Projects are expected to contribute to the following outcomes:

- Making European manufacturing companies, especially SMEs and small mid-caps, more sustainable and resilient through the best use of digital technologies and upskilling of personnel;
- Making jobs of humans working in the manufacturing sector safer and more attractive for a diverse population of workers;
- Increasing innovation capacity, agility and productivity of the manufacturing sector, in particular for SMEs and mid-caps;
- Increasing the competitiveness of SMEs and mid-caps by reducing the entry barriers to the use of advanced digital technologies, and transferring innovative solutions into the wider manufacturing community.

Scope:

ICT Innovation for Manufacturing SMEs (I4MS2) aims to support manufacturing SMEs and mid-caps in adopting the latest innovative digital technologies for their business operations. I4MS2 builds on I4MS and addresses more significantly a sustainable and resilient production.

The pandemic and economic crisis demonstrated the key role of digital technologies in responding quickly to external changes. Digitalisation improves resilience, agility and competitiveness, and enables cost-efficient production in Europe. It will also support a radical reduction of the environmental footprint of the sector. In this context, experimentation with innovative and secure digital technologies in their production processes, products and business models guided notably by competence centres specialised in the technologies mentioned below will enhance manufacturing companies to successfully manage the twin digital and green transformation of the coming years.

I4MS2 calls for Innovation Action projects that will support European SMEs and mid-caps to innovate and make more sustainable their products, production processes and business models through experimentation and testing. At least 50% of the budget should be allocated to SMEs and mid-caps to participate in the experiments. The proposals may include financial support to third parties to finance SMEs and mid-caps. Proposals should describe their complementarity to existing initiatives, namely the network of European Digital Innovation Hubs, which is supported through the Digital Europe Programme. They should also indicate how they will collaborate with European Digital Innovation Hubs.

Priority should be given to technologies that can:

- Improve the sustainability of processes and products: significantly reduce or reuse waste and lower the energy and carbon footprint;
- Make industrial processes more agile, secure and resilient to future changes;
- **Make manufacturing jobs more attractive for humans, whichever the age, gender or social and cultural background, through better human-machine interfaces and more intuitive interaction digital tools.**

The following technology areas should be addressed in proposals:

- Artificial intelligence applied to manufacturing, with a specific focus of AI applications at the edge;
- Cybersecure industrial internet of Things enabling trustworthy sharing of industrial data and value creation, to achieve further flexibility and agility of supply chains;
- Advanced interfaces and collaboration within smart working environments such as collaborative robots.

Proposals submitted under this topic should include a business case and exploitation strategy, as outlined in the introduction to this Destination.

Research must build on existing standards or contribute to standardisation. Interoperability for data sharing should be addressed. Additionally, a strategy for skills development should be presented, associating social partners when relevant.

All projects should build on or seek collaboration with existing projects and develop synergies with other relevant European, national or regional initiatives, funding programmes and platforms.

This topic implements the co-programmed European Partnership Made in Europe.

Specific Topic Conditions:

Activities are expected to start at [TRL 5](#) and achieve [TRL 7](#) by the end of the project – see General Annex B.

ICT Innovation for Manufacturing Sustainability in SMEs (I4MS2) (Made in Europe Partnership) (IA)

5. Evaluation and award:

Award criteria, scoring and thresholds are described in [Annex D](#) of the Work Programme General Annexes.

Submission and evaluation processes are described in [Annex E](#) of the Work Programme General Annexes and the [Online Manual](#).

To ensure a balanced portfolio covering all technology areas, grants will be awarded to applications not only in order of ranking but also to at least one project per technology area, provided that the applications attain all thresholds.

Indicative timeline for evaluation and grant agreement: described in [Annex F](#) of the Work Programme General Annexes.

6. Legal and financial set-up of the grants: described in [Annex G](#) of the Work Programme General Annexes.

Beneficiaries may provide financial support to third parties. The maximum amount to be granted to each third party is EUR 60 000.

The funding rate is up to 60% of the eligible costs. This funding rate applies both to members and non-members of the partnership, except for non-profit legal entities, where the funding rate is up to 100% of the total eligible costs.

Specific conditions

7. Specific conditions: described in the specific topic of the Work Programme.

INTERREG – Germany-Netherlands INTERREG open call for proposals

The main objectives of the cooperation program is to increase the innovative capacity of the border region and to reduce the barrier effect of the boundary. A natural person or a legal entity, organisation or a company can file a project application. Exclusively projects with Dutch and German cooperation. The first priority of the program is to strengthen the competitiveness of the region through smart growth. To have a good competitive position as region, in Europe, it is important to invest in research and development. The strong representation of high-tech companies and research institutions in the region, offers the opportunity to – in constant cross border collaboration – improve market opportunities and sustainable support SMEs.

Digital Europe – Testing and Experimentation Facility for Manufacturing

Objective The world-class large-scale reference site for testing and experimentation of AI-powered solutions will enable integrating state-of-the-art AI and digital technologies in the manufacturing domain, and will foster the deployment of trustworthy, transferable and scalable industrial AI in Europe. A transition towards a more digital manufacturing industry will improve quality and sustainability of production. Scope The manufacturing TEF will provide physical and virtual access to real-life manufacturing resources that can be used for testing and experimenting with AI solutions. Examples of such manufacturing resources are model factories that combine different technologies.

The main objectives of the cooperation program is to increase the innovative capacity of the border region and to reduce the barrier effect of the boundary. A natural person or a legal entity, organisation or a company can file a project application. Exclusively projects with Dutch and German cooperation, will be funded.

The first priority of the program is to strengthen the competitiveness of the region through smart growth. To have a good competitive position as region, in Europe, it is important to invest in research and development. The strong representation of high-tech companies and research institutions in the region, offers the opportunity to – in constant cross border collaboration – improve market opportunities and sustainable support SMEs.

To achieve the objectives in the field of innovation, especially for the program relevant sectors such as Agri-business/food, Health & Life Science, High Tech Systems & Materials (HTSM), Logistics and Energy / reduction of carbon dioxide, it is necessary to create more and better cross border clusters and to conduct joint research. The program invests in the above mentioned sectors in the form of the so called strategic initiatives.

OBJECTIVE 1: INNOVATION IN SMEs
As a result of the support of projects in priority 1, product and process innovations in SMEs are pursued. The result of the contribution of the program will be positively assessed at the end of the program period if it shows that the percentage of SMEs, which introduces product and/or process innovations, has been increased.

OBJECTIVE 2: ENERGY AND LOW CARBON ECONOMY
The transition of the energy system and a more sustainable use of natural resources are both for Germany and for the Netherlands one of the key priorities and a big challenge for the border region in the coming years. To support the transition of the energy system, new technologies and innovations are required. These technologies and innovations lead to reinforcement of the competitiveness in the region, and are essential for the development of the border region for a low carbon economy. Especially in this area, both countries can learn a lot from one another.
